

Saaskart

SDE, Buyer Solutions

Engineering · Remote (India) · Full-time

About Saaskart

Saaskart is building the trusted marketplace and intelligence layer for how the world discovers, compares, evaluates, and buys software, AI agents, and service providers — powered by SIA, our AI buying assistant. We are remote-first, high-ownership, and buyer-first: we never sell a ranking and never fake a review.

About the role

You build the experiences buyers use to discover, compare, evaluate, and buy technology — search, comparisons, the buyer dashboard with SaaS stack management, and the surfaces that SIA, our AI buying assistant, powers. You make confident technology buying feel effortless.

What you'll do

- Design, build, and ship full-stack features for buyer discovery, comparisons, and the buyer dashboard.
- Build SaaS stack management and AI-assisted experiences in partnership with the SIA team.
- Own quality end-to-end: clean code, tests, performance, and reliability in production.
- Collaborate with design, product, and the seller-solutions team on shared systems.
- Move fast — prototype, ship, and iterate on real buyer feedback.

What we're looking for

- 3+ years building full-stack web applications in a modern stack (React/Next.js, TypeScript, Node, SQL).
- Strong product sense and ownership; comfortable across frontend, backend, and data.
- Care for UX, performance, and accessibility.
- Pragmatic, fast-shipping, and quality-minded.

Nice to have

- Experience integrating LLMs, search, or recommendation features.
- Marketplace or B2B SaaS product experience.

How to apply: email careers@saaskart.co or apply at saaskart.co/careers with your resume and a short note on what you'd want to own. All roles are full-time and remote (India).
